**Taiho Drink Type Medicine for the Common Cold “Gingyo-san”** is a herbal medicine in ready-to-drink liquid form that is effective for the early symptoms of the common cold such as sore throat, cough, and dry mouth. Gingyo-san is an extremely popular herbal medicine in China (yin qiao san), where, similar to Kakkonto, it is often prescribed for the symptoms of the common cold. Gingyo-san is expected to relieve sore throat, because it contains 10 herbal medicines known for helping suppress and relieve the inflammation that causes sore throat, such as flos ionicerae (honeysuckle) and forsythia.

This product is the only drink-type Gingyo-san available in Japan. Since it is a drink, it can be taken anytime and anywhere without water. In addition, since it contains no ingredients that cause sleepiness, it can be used for symptoms that suddenly occur while away from home. It can be drunk as soon as cold symptoms appear.

## Product Features

- The action of 10 types of herbal medicines works to improve early symptoms of the common cold such as sore throat, cough, and dry mouth.
- The only ready-to-drink type Gingyo-san in Japan.
- Since it contains no ingredients that cause sleepiness (antihistamines), it can be safely used even while working.

According to a survey conducted by Taiho Pharmaceutical, the most common symptom experienced in the early stages of a cold is sore throat, with 75.2%—or three out of four people—indicating sore throat in the survey. Gingyo-san is expected to be effective on the symptoms most people suffer, including the number-one symptom, “sore throat,” and the number three symptom “cough.”

Survey name: Survey on the Common Cold

Survey subjects: 23,215 men and women aged 20 to 69 who had caught a cold within the previous year

Survey period: March 2016

Organization responsible for the survey: Taiho Pharmaceutical

Organization responsible for the implementation of the survey: Anterio Inc.
